**Kastle Systems Launches myKASTLE,  
a First-of-its-Kind Online Tool Providing Commercial Real Estate Professionals  
New Capabilities for Managing Security  
from Anywhere, at Anytime**

*myKASTLE delivers new levels of awareness, mobility and convenience*

Falls Church, Va. -- Kastle Systems has announced today the release of myKASTLE, an innovative web-based tool designed to bring convenience to its customers through new capabilities in remote security management. The new service expands and enhances Kastle's current managed security solution.

"To optimize security and business performance, property managers today need two things: access and information," states Piyush Sodha, Co-Chairman and CEO of Kastle Systems. "myKASTLE was designed to supply both of these as part of a rich end-to-end solution unmatched in the industry. The result is a simple and convenient way for our customers to manage their security."

myKASTLE features an easy-to-use interface, accessible from any Internet connection, utilizing any Internet-enabled device, even an iPad. Users of myKASTLE can instantly view security information through interactive floorplan maps which highlight events and current status. Security systems can be turned on and off, doors locked and unlocked, access granted, and schedules changed, all from the portal, which is securely hosted by Kastle Systems.

A rich reporting system is an essential part of the myKASTLE solution. Managers can easily gain insight into the patterns of use of a property and opportunities to improve safety, security, and operational efficiency. For example, myKASTLE reporting can detail activity in a building after hours, showing who arrived at what time, and whether or not they tried to access areas off limits. Select benefits customers will appreciate include tighter security, optimized resource efficiency, and even opportunities for improved energy management.

“By giving property managers this new tool, they are able to take a proactive and holistic approach to security and safety for their assets and people,” says Sodha. “Kastle has a long tradition of providing security for our customers 24/7. It just makes sense that our clients should have at their fingertips the power and flexibility to manage what is critical to them from anywhere at any time.”
